SOLIDWORKS HARDWARE RECOMMENDATIONS

The following is a summary of the key components of an ideal SOLIDWORKS PC. If you are unsure about more complex requirements such as Simulation and Visualisation products see the appendix.

PROCESSOR (CPU)

This carries out the majority of calculations within SOLIDWORKS; the most common limiting factor is the speed in GHz of the CPU, the faster (GHz) the better. Although note that on modern CPU's with higher core counts the base speed may be quite low especially for laptops.

Look for the maximum "Turbo Boost" speed as the best guide of performance for most SOLIDWORKS tasks. For SOLIDWORKS parts and assemblies typically 1-2 cores are fully utilised.

This is as many features need the previous one to be rebuilt before the next task can be carried out, they cannot be done in parallel. , There are however some tasks that can take advantage of more cores such as drawings with many views many simulation types.

i5, i7,i9 VS Xeon - The main advantage of Xeon CPUs currently is support for error correcting code (ECC) RAM which can correct for random hardware errors, helping to improve reliability in critical applications (making them more suitable for long renders, simulation and server products).

Intels 10th and 11th generation CPU's currently used in most workstations still have the lead in SOLIDWORKS performance over AMD Processors as of January 2022.

We recommend:
High GHz Intel 10th
Generation 8-10 core i7,
i9 or Xeon equivalent

MEMORY (RAM)

When a document is opened in SOLIDWORKS it is loaded into RAM, you need enough so that Windows does not resort to using the hard disc (virtual memory). RAM is rated in MHz for speed; each increase tends to yield marginal gains so cost is a key factor. 16GB is the minimum we would recommend for a new system, with 32GB being the current sweet spot for cost vs performance for more complex data sets, multi tasking and using tools such as simulation in addition to core SOLIDWORKS design tasks frequently.

We recommend a
minimum of 16GB of
DDR4 RAM

GRAPHICS CARD

The graphics card is fundamental to your productivity. It assists the processor accelerated operations such as zooming and rotating. On-board Intel HD graphics, and cards such as GeForce and Radeon (non Pro) are consumer level cards which are not supported. Using these can lead to poor performance and stability. This is your productivity so you should not underestimate the potential hidden costs of having an unsupported setup.

For many years we have use and recommended the NVIDIA Quadro range as being the professional cards used in CAD workstations.

This branding was retired in 2021 however the rules remain the same, avoid gaming cards as there is still a separate range of cards specifically for professional applications such as SOLIDWORKS which the developers work with closely with NVIDIA to ensure maximum performance and stability along with certification.

For the latest generation look out for the "A" prefix, with cards such as the NVIDIA RTX A2000, A3000, A4000 etc.

We recommend
Minimum NVIDIA T1000
for general SOLIDWORKS
use and A2000 or above
for more complex
datasets and Visualize

FIND OUT MORE

MONITOR

If buying a new monitor we recommend resolution of 1920x1080 at a minimum size of 15.6 inches for laptops or 24 inches for desktops. or 27 Inch and 32 inch at QHD resolutions (2560x1440).

4K+ screen resolutions are better supported by SOLIDWORKS 2020 onwards however we do not recommended on screens below 27 inches in size and certainly do not currently recommend these in laptops and would advise checking all applications compatibility with these screens before purchasing.

STORAGE (HARD DRIVE)

Solid State Drives (SSD) offer a significant performance upgrade and are recommended to at least be used for your operating system and programs if budget allows. Try to allow for 25-50% free for best performance.

We recommend:
Fast solid state drives
(512GB +)

OPERATING SYSTEM (OS)

SOLIDWORKS supports Windows 10 Professional or above.

Note: Windows Pro for Workstations is only required for new PC's with Xeon CPUs.

Windows 11 is supported by SOLIDWORKS 2022 SP2 and above only. We still recommend windows 10 as the more proven stable platform.

OLDER OPERATING SYSTEMS

SOLIDWORKS 2020 SP5 is the last release which will install and support Windows 7 64bit. SOLIDWORKS 2021 will not install on Windows 7.

Windows 8/8.1 are not supported for versions 2018 or newer.

We recommend:
Windows 10 Pro, Pro
for Workstations or
Enterprise 64bit

DELL PROSUPPORT

All systems supplied by Solid Solutions come with atleast 3 years Dell ProSupport, who are a team of highly trained technicians based in Scotland and Ireland during UK business hours and worldwide out of hours. In the event an issue cannot be solved over the phone they will typically dispatch an engineer to fix the system the following working day.

Solid Solutions Support are of course also happy to help rule out software issue and work with Dell Pro Support if required.

Below is a guide of what we recommend for most users. These are only guidelines for the majority of users, if you have a question please contact your account manager or hardware@solidsolutions.co.uk for advice. Specifications are correct as of January 2022 although our website always has the most up to date specifications, see solidsolutions.co.uk/hardware

With such a range of products we have added a new performance guideline for the most commonly used products provided by Solid Solutions.

SOLIDWORKS

SOLIDWORKS SIMULATION

SOLIDWORKS FLOW SIMULATION

SOLIDWORKS PLASTICS

SOLIDWORKS COMPOSER

SOLIDWORKS ELECTRICAL

CAM

SOLIDWORKS VISUALIZE

FIND OUT MORE

With the vast range of SOLIDWORKS solutions now available what is required to improve performance varies. For instance adding more fast cores may benefit Simulation products whereas SOLIDWORKS Visualize would benefit from a higher spec Quadro graphics card. You can start to see why it may not be as simple as just spending more, what you invest in is key and we aim to help you get the most for your money.

E.g. on the left is the lowest performance for SOLIDWORKS and on the right denotes best performance.

We have partnered with Dell for many years for both our own internal use and to provide systems to our customers so that they can benefit from the discounts we receive and the reassurance that it will be ideally specified for SOLIDWORKS.

If you aren't sure what is most suitable please get in contact with your account manager or email:
hardware@solidsolutions.co.uk

DESKTOP ALL ROUNDER PLUS

Dell Precision™ 3650

Dell 3650 Mini Tower including an 11th Generation 8 core i7 CPU, 16GB RAM and latest generation mid-range NVIDIA RTX A2000 6GB Professional graphics card.

- Windows 10 Professional 64bit
- 16GB (2x8GB) DDR4 Ram
- 6GB NVIDIA RTX A2000 Graphics Card
- 512GB PCIe NVMe Solid State Drive
- 460W Chassis with 8x DVD+/-RW
- Dell Wired Keyboard & Mouse
- **No Display or WiFi INCLUDED**
- 3Yr Dell ProSupport and Next Business Day On-Site Service

Performance guidelines

Monitors sold separately, please contact us for more information.

DESKTOP HIGH END

Dell Precision™ 3650

Dell 3650 Mini Tower a very capable machine for general SOLIDWORKS use. with an 11th Generation 8 core i7 CPU, 32GB RAM and High End 16GB NVIDIA RTX A4000 Professional graphics make this well suited to more complex datasets.

- Intel Core i7-11700K 8 cores, 3.6GHz Turbo Boost up to 5.0GHz
- Windows 10 Professional 64bit
- 32GB (2x16GB) DDR4 Ram
- 16GB NVIDIA RTX A4000 Graphics Card
- 1TB PCIe NVMe Solid State Drive
- 460W Chassis with 8x DVD+/-RW
- Dell Wired Keyboard & Mouse
- **NO DISPLAY or WiFi INCLUDED**
- 3Yr Dell ProSupport and Next Business Day On-Site Service

Performance guidelines

DESKTOP ULTIMATE & SIMULATION

Dell Precision™ 3650

Dell 3650 Mini Tower featuring a 10 Core Xeon CPU, 64GB RAM, 2TB of storage all of which gives flexibility to deal with complex SOLIDWORKS, Simulation, Flow Simulation & Visualization tasks.

- Intel Xeon W-1290P 10 Cores, 3.7GHz (Turbo Boost up to 5.3 GHz)
- Windows 10 Pro for Workstations 4 cores plus-64bit
- 64GB (2x32GB) DDR4 Error Code Correcting (ECC) RAM
- 16GB NVIDIA RTX a4000 Graphics Card
- 1TB PCIe NVMe Solid State Drive + Additional 1TB PCIe NVMe Solid State Drive
- 460 W Chassis with 8x DVD+/-RW
- Dell Wired Keyboard & Mouse
- **NO DISPLAY or WiFi INCLUDED**
- 3Yr Dell ProSupport and Next Business Day On-Site Service

Performance guidelines

DESKTOP HIGH END VISUALIZE

Dell Precision™ 3650

Aimed at users who deal those who deal with very complex SOLIDWORKS and Visualize projects featuring the latest Ampere generation NVIDIA RTX A5000 24GB Graphics card.

- Intel Core i9-11900K 8 cores 3.5GHz (Turbo Boost up to 5.3 GHz)
- Windows 10 Professional 64bit
- 64GB (2x32GB)DDR4 Ram
- 24GB NVIDIA RTX A5000 Graphics Card
- 1TB PCIe NVMe Solid State Drive
- 1000W Chassis with 8x DVD+/-RW r
- Dell Wired Keyboard & Mouse
- **NO DISPLAY or WiFi INCLUDED**
- 3Yr Dell ProSupport and Next Business Day On-Site Service

Performance guidelines

DESKTOP ULTIMATE FLOW SIMULATION

Dell Precision™ 5820

Primarily aimed at users who deal with large cell count Flow simulation problems, Could also be useful for heavy users of SOLIDWORKS Plastics, CPU based rendering tools such as Photoview 360. For other Simulation use it would mainly be suited to those users wanting to run multiple tasks at once.

- Intel Xeon W-2275 14 Cores, 3.3GHz, Turbo boost up to 4.8GHz
- Windows 10 Professional For Workstations 64bit (4 Cores Plus)
- 64GB (4x16GB) 2933MHz DDR4 Error Code Correcting (ECC) RDIMM RAM
- 16GB NVIDIA RTX A4000 Graphics Card
- 1TB PCIe MVM Solid State Drive + additonal 1TB PCIe NVMe Solid State Drive
- 950W Chassis with 8x DVD+/-RW
- Dell Wired Keyboard & Mouse
- **NO DISPLAY or WiFi INCLUDED**
- 3Yr Dell ProSupport and Next Business Day On-Site Service

Performance guidelines

DESKTOP ULTIMATE VISUALIZE

Dell Precision™ 5820

Aimed at users who deal those who use Visualize extensively with dual graphics cards resulting in images, animations produced in typically about half the time of a system with a single graphics card.

- Processor: Intel Core i9-10900X 10 Cores 3.7GHz, Turbo boost up to 4.7GHz
- Memory: 64GB (4x16GB) DDR4 2666MHz
- Hard Drive: 1TB PCIe NVMe Solid State Drive
- Chassis: 950W with 8x DVD+/-RW,
- Graphics: Dual 16GB NVIDIA Quadro RTX 5000 Graphics Card (6144 CUDA Cores total), 3 x Display Port, 1x USB C Virtual Link, VR Ready
- Operating System: Windows 10 Professional 64bit
- Support: 3 Year Dell ProSupport and Next Business Day On-Site Service

Performance guidelines

LAPTOP ALL ROUNDER

Dell Precision™ 3561

15.6 inch laptop, aimed at being the best balance between price and performance with latest 11th Gen Intel i7 CPU, mid-Range NVIDIA professional graphics and 16GB of ram it is well suited for core SOLIDWORKS tasks of part, assembly and drawing creation.

- Intel Core i7-11850H-8core 2.5GHz Turbo Boost up to 4.8GHz
- 15.6 Inch FHD, 1920x1080,with Cam and Mic
- Windows 10 Professional 64bit
- 16GB (1x16GB) DDR4 RAM
- 4GB NVIDIA T1200 Graphics Card
- 512GB M.2 PCIe NVMe Solid State Drive
- 3Yr ProSupport and Next Business Day On-Site Service

Performance guidelines

LAPTOP ALL ROUNDER PLUS

Dell Precision™ 7560

15.6 inch laptop, with latest Ampere generation NVIDIA RTX professional Graphics making this more suited for more complex assemblies and SOLIDWORKS Visualize usage. Also includes latest 11th Gen Intel i7 CPU, 16GB of ram it is well suited for medium complexity part, assembly design and smaller simulation tasks.

- Intel Core i7-11850H-8core 2.5GHz Turbo Boost up to 4.8GHz
- 15.6 Inch FHD, 1920x1080,with Cam and Mic
- Windows 10 Professional 64bit
- 16GB (2x8GB) DDR4 RAM
- 6GB NVIDIA RTX A3000 Graphics Card
- 512GB M.2 PCIe NVMe Solid State Drive
- 3Yr ProSupport and Next Business Day On-Site Service

Performance guidelines

LAPTOP ALL ROUNDER PLUS

Dell Precision™ 7760

17.3 inch laptop, with latest Ampere generation NVIDIA RTX professional Graphics making this more suited for more complex assemblies and SOLIDWORKS Visualize usage. Also includes latest 11th Gen Intel i7 CPU, 16GB of ram it is well suited for medium complexity part, assembly design and smaller simulation tasks.

- Intel Core i7-11850H-8core 2.5GHz Turbo Boost up to 4.8GHz
- 17.3 Inch FHD, 1920x1080,with Cam and Mic
- Windows 10 Professional 64bit
- 16GB (2x8GB) DDR4 RAM
- 6GB NVIDIA RTX A3000 Graphics Card
- 512GB M.2 PCIe NVMe Solid State Drive
- 3Yr ProSupport and Next Business Day On-Site Service

Performance guidelines

LAPTOP ALL HIGH END 15"

Dell Precision™ 7560

15.6inch laptop with new 11th Gen Intel i9 CPU, NVIDIA RTX Professional graphics card,32GB ram to handle more complex data-sets and simulation tasks . Also particularly well suited for SOLIDWORKS Visualize 2021 SP3 and newer which supports these new graphics cards.

- Intel i9-11950H 8 Core 2.6GHZ Turbo Boost up to 5.0GHz
- 15.6 inch FHD, 1920x1080, with Cam & Mic
- Windows 10 Professional 64bit
- 32GB (2 x 16GB) DDR4 RAM
- 8GB NVIDIA RTX A4000 Graphics Card
- 1TB M.2 PCIe NVMe Solid State Drive.
- 3Yr ProSupport and Next Business Day On-Site Service

Performance guidelines

LAPTOP HIGH END 17"

Dell Precision™ 7760

17.3inch laptop with new 11th Gen Intel i9 CPU, NVIDIA RTX Professional graphics card, 32GB ram to handle more complex data-sets and simulation tasks. Also particularly well suited for SOLIDWORKS Visualize 2021 SP3 and newer which supports these new graphics cards.

- Intel i9-11950H 8 Core 2.6GHz Turbo Boost up to 5.0GHz
- 17.3inch FHD, 1920x1080, with Cam & Mic
- Windows 10 Professional 64bit
- 32GB (2 x 16GB) DDR4 RAM
- 8GB NVIDIA RTX A4000 Graphics Card
- 1TB M.2 PCIe NVMe Solid State Drive.
- 3Yr ProSupport and Next Business Day On-Site Service

Performance guidelines

LAPTOP ULTIMATE

Dell Precision™ 7760

17.3 Laptop designed for maximum performance, this Ultimate spec includes latest 11th Gen Intel Xeon CPU and 64GB of Error Code Correcting RAM to handle the most complex data sets and simulations. Also particularly well suited for SOLIDWORKS Visualize 2021 SP3 and newer with High End NVIDIA RTX Professional from the latest Ampere generation.

- Intel Xeon W-11955M 8 Core 2.6GHz Turbo Boost upto 5.0GHz
- 17.3-inch, FHD, 1920x1080, with Cam and Mic
- Windows 10 Pro for Workstations 64bit
- 64GB (2 x 32GB) DDR4 ECC RAM
- 8GB NVIDIA RTX A4000 Graphics Card
- 2TB M.2 PCIe NVMe Solid State Drive.
- **No Internal Optical Drive Available**
- 3Yr Dell ProSupport and Next Business Day On-Site Service

Performance guidelines

LAPTOP ULTRAPORTABLE ULTIMATE

Dell Precision™ 5760

The world's smallest 17.0 inch workstation laptop. This ultra-thin and light chassis with infinity edge screen all 4 sides are almost border-less meaning it feels more like a 15 inch class laptop. This Ultimate spec includes latest 11th Gen Intel Xeon CPU and 64GB of Error Code Correcting RAM to hand the most complex data sets and simulations. Also particularly well suited for SOLIDWORKS Visualize 2021 SP3 and newer which supports these new graphics cards.

- Intel Xeon W-11955M 8 Core 2.6GHZ Turbo Boost upto 5.0GHz
- 17.0-inch,FHD, 1920x1200, with Cam and Mic
- Windows 10 Pro for Workstations 64Bit
- 64GB (2 x 32GB) DDR4 ECC RAM
- 6GB NVIDIA RTX A3000
- 2TB M.2 PCIe NVMe Solid State Drive.
- **No Internal Optical Drive Available**
- 3Yr Dell ProSupport and Next Business Day On-Site Service
- **N.B. USB C Ports only** 1x USB C to 1x USB A and 1xHDMI adaptor provided
- WD19DCS docking station or Dell DA310 Mobile adaptor recommended for connecting to non USB C devices

Performance guidelines

APPENDIX- FAQ AND PERFORMANCE DATA

IS SOLIDWORKS SUPPORTED ON MAC?

SOLIDWORKS will not install natively on Apple computers. However, some customers run successfully on Intel based Mac OSX based systems, using emulation (parallels) or Boot Camp (installing windows on mac to dual boot). Compatibility is further complicated by newer Apple systems switching to Arm CPU's as used in mobile phones which cannot run the same code as Intel chips natively.

Please note that SOLIDWORKS may suffer from the lack of graphics acceleration on Apple Mac based machines, as pro level graphics along with certified graphics drivers are not available this is particularly noticeable on more complex data sets such as assemblies with many components.

WHAT ABOUT VIRTUALISATION?

SOLIDWORKS have tested to confirm that the software will install on certain virtualisation platforms, however support in terms of performance and stability is down to the virtualisation provider and graphics card manufacturer. The latest NVIDIA Quadro Virtual Data Center Workstation based setups support everything including accelerating SOLIDWORKS Visualize when using Pascal or Turing generation cards under VMware or Citrix environments.

RECOMMENDATIONS FOR DATA MANAGEMENT (PDM)

Ideally a dedicated Windows server/s should be used for either a or SOLIDWORKS PDM Standard and Professional vaults. Besides giving maximum performance for the CAD users, using a dedicated server provides a location to store company standards and templates.

For minimum requirements, please visit:

solidworks.com/support/system-requirements

We now also offer full supported private cloud hosted PDM environments a hassle free way to switch away from an on premise server.

For more information visit

solidsolutions.co.uk/PDM-Virtual-Servers

please contact your account manager or call **01926 333777** for further advice.

FIND OUT MORE

FIND OUT MORE

SLOWDOWNS - SHOULD I ADD MORE RAM?

Adding more RAM will not solve performance issues unless you are running out, tools such as the windows performance monitor or even at a basic level the task manager. Run your normal tasks and see if you are running low (the SOLIDWORKS performance Monitor should also alert you) you only need enough so that you don't run out this would start using virtual memory on your hard disc which is many times slower. Often using best practices in the software can speed things up otherwise you have to identify where the bottlenecks are before upgrading hardware.

DOES SOLIDWORKS USE MORE THAN ONE CORE?

It is a common misconception that nothing in SOLIDWORKS will use more than 1 core. The developers are always looking for opportunities to use multiple cores where possible. However, the solving process (rebuilding) used for parametric modeling is by nature very linear i.e. one feature must be rebuilt before the next therefore SOLIDWORKS will not always use all the available cores the full use of 1-2 cores is more typical during a rebuild.

This is why we advise to look for the latest generation CPU's with the highest "Turbo Boost" speed as a better indication of the speed of lightly threaded workloads for SOLIDWORKS modeling.

Many of the activities such as dialogue box interaction; drawings with multiple views and simulation tasks also benefit significantly from multiple cores to varying degrees as see on the following pages.

However, drawings with multiple views, most simulation and photoview 360 rendering tasks also benefit significantly from multiple cores to varying degrees more detail on this follows below.

SOLIDWORKS VISUALISE - HOW CAN I SPEED UP MY RENDERS?

SOLIDWORKS Visualize Standard is a new standalone product for which a complimentary license is provided with each SOLIDWORKS Professional and Premium subscription. SOLIDWORKS Visualize Professional available at extra cost including animation and many other functions to leverage your 3d data. Both options can be installed either on the SOLIDWORKS users system or on another users system.

Speed in Visualize is primarily down to using NVIDIA GPU (graphics card) CUDA cores to achieve massive speed ups vs traditional CPUs. AMD graphics cards will not accelerate this process however the software will still run in CPU only mode on such setups.

Also note that the new Visualize AI denoiser included in versions 2018 SP3 and above is only supported on NVIDIA graphics cards with 4GB or more of dedicated video memory. This can be used to reduce the number of passes required to eliminate noise/artefacts in the render by up to 10 times. I.e. if you need 1000 passes in a traditional rendering tool you may be able to use as little as 100 using the denoiser.

When working in Visualize a mid-high end NVIDIA card (Quadro A2000/A3000 6GB+) will show significant acceleration with 6GB will be enough in most cases. More complex datasets may require 8GB or more dedicated memory otherwise the Visualize render process will revert to CPU mode which is considerably slower.

If possible adding a second card of the same specification will also reduce render times almost in half however it does not add to the total memory available.

Each new generation of cards increases performance so you cannot directly compare specifications between them.

Below results using the SOLIDWORKS Visualize Benchmarks to render a 10 second turntable animation. We have picked desktop cards from 2017 and 2021 to show the difference just 4 years can make in hardware.

MODEL	Quadro P4000 8GB (2017)	Quadro P5000 16GB (2017)	RTX A4000 16GB (2021)	RTX A5000 24GB (2021)
CUDA Cores	1792	2560	6144	8192
Ray Trace Cores	N/A	N/A	48	64
10 Sec Turntable Render time	28.25	25.29	13.49	10.51

NOTE: Dual graphics cards do not increase the available memory for SOLIDWORKS Visualize, you are still limited to the amount of memory in the smaller card.

APPENDIX- FAQ AND PERFORMANCE DATA

WHICH SIMULATION TYPES BENEFIT MOST FROM MULTI CORE PROCESSORS?

Most simulation types see some benefit from multiple cores; simulations using the direct sparse and FFEPlus Iterative solver see the most benefit.

Solvers in SOLIDWORKS Premium and Simulation Standard are limited to 8 cores. Some solvers in SOLIDWORKS Simulation Professional and Premium 2021 and newer can take advantage of more than 8 cores for certain studies.

Keep in mind that if you have capacity to spare in terms of available cores and RAM you should be able to continue working productively in other applications while carrying out simulations. For that reason, 8-10 cores is currently the sweet point as you should have a good balance of speed and number of cores + some spare resources for other tasks.

Below you can find data based on some testing by SOLIDWORKS and Solid Solutions which is an indication only, there is no guarantee of how well a particular simulation study will take advantage of multiple cores.

SOLIDWORKS SIMULATION

MESHING

From SOLIDWORKS 2011 the curvature based mesher can take advantage of multiple cores where as the standard mesher is mostly single threaded.

STATIC SIMULATION - ASSEMBLIES AND PARTS

A static simulation of an assembly with bolt connectors sees a 75% improvement in solve time using the direct sparse solver when going from 1 to 4 cores. Using the FFEPlus Solver this benefit may only be 15%.

Across is a table produced by SOLIDWORKS showing the performance increase for static simulation of more cores on the various solvers; Direct Sparse, FFEPlus and Large Problem Direct Spare Solvers.

The most computationally intensive stages of the analysis using a sparse solver are generally decomposition of stiffness matrix and solving contact constraints. These are the stages which support multi-core, hence making them less time consuming.

OTHER SOLIDWORKS SIMULATION TYPES

NON LINEAR SIMULATION

A similar setup as a non-linear simulation on a single part yields a 58% improvement using the direct sparse solver but no improvement when using the FFEplus.

THERMAL SIMULATION

Thermal simulation sees an 82% improvement using the direct sparse solver, again no improvement when using FFEPlus.

OTHER SIMULATION TYPES

Simulation types which are mostly single threaded are:

FATIGUE

The fatigue solver itself uses only one core in testing but preparing to run a fatigue study involves running one or more static studies which do benefit from multiple cores, overall there is an improvement.

FREQUENCY

Frequency saw less improvement in testing than most simulation types, contrary to the other simulation types direct sparse solver saw 0% improvement whereas the FFEPlus Solver saw a 25% improvement.

OPTIMIZATION

Most of the time spent solving an optimization analysis is taken up by running loops of design iterations of the studies defined for constraints. The benefit would depend on the type of study optimised.

LINEAR DYNAMIC

The actual post dynamic analysis and stress calculations use special solvers which used only one core in testing. However, performing a linear dynamic analysis involves first finding resonant frequencies, which did show usage of more than one core when using the FFEPlus solver.

PRESSURE VESSEL DESIGN

The majority of the time taken to complete a pressure vessel analysis is running static studies that you wish to combine. The actual calculations for combination of results used only one core during testing but as this made up a small percentage of the total time to perform the analysis there was a significant performance improvement.

DROP TEST

Only one solver type available, the test model used only one core.

SOLIDWORKS PLASTICS

SOLDIWORKS Plastics shows good gains for all parts of the process. Note the jump here this is thought to be as when using 12 cores in our testing we were using all 10 cores from 1 CPU and 2 from the second, the data communication between the two likely being the cause of the anomalous results.

FLOW SIMULATION

In SOLIDWORKS Flow Simulation, great improvements were made in SOLIDWORKS 2012 and above to take advantage of more than 4 cores, larger cell count models see the most benefit.

FLOW SIMULATION SPEED VS NUMBER OF CORES

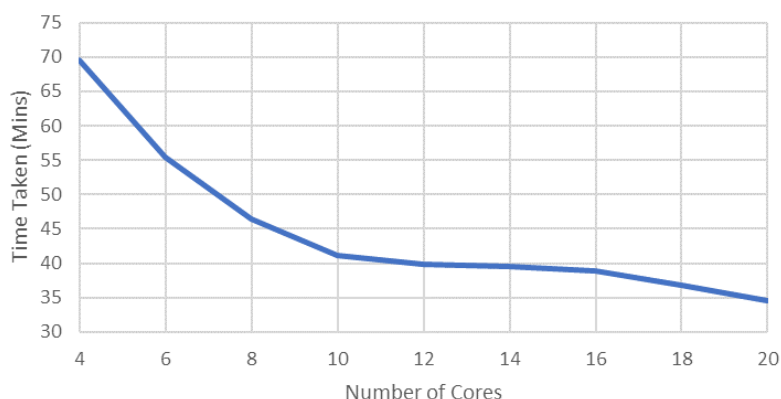

From SOLIDWORKS 2014 onwards meshing is multithreaded, with the largest gains being for large meshes.

- Larger meshes see the highest gain
- For a single core, meshing is 30% faster on average compared to 2013

Complex Flow Simulation problems with a large cell count also typically show more benefit from core counts over 8 cores than smaller problems.

Dell 7910 Dual 10 Core 3.1GHz- Flow High Cell
