

SWOOD DESIGN

SWOOD Design makes it easier to achieve your woodworking projects.
Design faster using dedicated features by drag & drop.

Material Management

- Thickness
- Decor or grain direction
- Edgebanding
- Laminates

Connectors

Connectors allow to assemble panels and pieces of wood with traditional (mortise & tenon) or mechanical (dowels, cams) types of joint.

Create your insertion rules and apply by drag & drop.

SWOODBox

A SWOODBox is an assembly adaptable to a box area. It allows for the creation of a multitude of design scenarios, easily editable once inserted in the defined zone.

Fill your furniture with elements (doors, drawers, shelves, ...), including hardware and machining of adjacent parts.

Layout

Insert your cabinet and link its dimensions to a layout sketch.

Miscellaneous

- SolidWorks assemblies copy tool.
- Profiling feature.
- Parametric panel library.
- Customisable Reporting (Cut list, Hardware list, ..).
