SOLIDSOLUTIONS
SUPPORTING EXCELLENCE

BEST PRACTICE DESIGNER

Overview

Your company has invested in SOLIDWORKS software and training, but are your engineers producing the designs in the most efficient way? Are they using the correct tools and features for your industry?

This seminar style session will go beyond the advice given in our tips and tricks or whats new presentations focusing less on features and more on the work-flows that ensure best use of the SOLIDWORKS software.

What we will cover:

- User interface setup
- Best practice sketching
- Best practice part generation
- Speed up assembly creation
- Are your drawings working for you?
- The value of your data. Are you controlling documents correctly?
- Optimize your templates to work for you
- Appreciate the importance of working in a consistent way across the team
