

TECH AUDIT & ROAD MAP

Overview

Your company has invested in SOLIDWORKS software and training, but are your engineers producing the designs in the most efficient way? This service focuses on your design team and asks questions like; Are they using the correct tools and features for your industry? Are they following your chosen work flow?

In this interview style session we converse with your engineers to understand exactly what needs to be achieved with SOLIDWORKS, understanding your design process from A - Z. Then advise on best practices and work flow to allow them to design more efficiently. A number of small changes to your process can drastically reduce the overall time to market.

What we will cover:

- A detailed report on efficiency of the design team and a potential route to improvement will be provided
- Do your users have awareness of the features and processes required to get the job done in the best way?
- Challenge the way SOLIDWORKS is being used within your company ensuring you get the most out of the software
- Tips and advice allowing you to speed up the design process
- Reduce time spent on manual tasks where automation is possible

NOTE:

This service will advise on the process being used by the design team and may also indicate areas where user training is required. Please be aware that we offer an in depth Skills Assessment should you wish to gain a full understanding of your Design Team's SOLIDWORKS capabilities.
